

Space Test Review

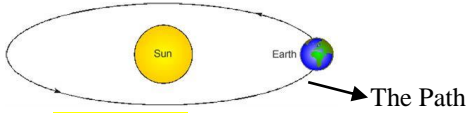

Name: _____

Section: _____

Date: _____

Directions: Circle the answer which is most correct.

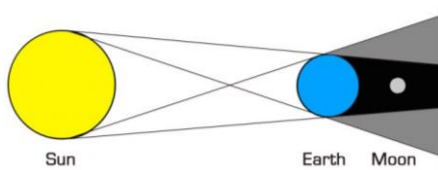

1. The following picture is of what?

- Orbit
 - Constellation
 - Axis
 - Tide
2. Patterns of stars in the sky is called a _____.
- Rotation
 - Orbit
 - Axis
 - Constellation
3. This occurs when an object in space gets between the Sun and another object.
- Eclipse
 - Ellipse
 - Solar Eclipse
 - Lunar Eclipse
4. What is found between Mars and Jupiter?
- Saturn
 - Comet
 - Meteorite
 - Asteroid Belt
5. Which of the following planets is NOT a gas giant?
- Uranus
 - Saturn
 - Jupiter
 - Mars
6. Who was the first scientist to study the night sky using a telescope?
- Nicolaus Copernicus
 - Isaac Newton
 - Edwin Hubble
 - Galileo Galilei

Space Test Review

7. _____ is the **study** of the Sun, Moon, stars and other objects in space.
- Galaxy
 - Solar System
 - Astronomy**
 - Universe
8. Which planet rotates on its side?
- Mars
 - Saturn
 - Uranus**
 - Neptune
9. Jupiter has a "Great Red Spot" it is made of?
- Iron soil which make it look red
 - Weather storm**
 - Red Mountains
 - Red Crater with lava
10. _____ is the largest object in our solar system.
- Jupiter
 - Asteroid Belt
 - The Sun**
 - Earth
11. Look at the picture below:

The following picture is of what?

- Lunar Eclipse**
- Solar Eclipse
- Ellipse
- Revolution

Directions: Write "T" if the statement is TRUE and "F" if the statement is FALSE.

12. **T** Earth's rotation causes day and night.
13. **T** The largest star in our solar system is the sun.
14. _____ ~~From Earth, we always see a different side of the moon.~~

Space Test Review

15. **T** Neptune, Saturn, Jupiter, Uranus are all gas giants.
16. **T** Galaxy is a system of millions to trillions of stars, gases and dust held together by gravity.
17. **F** The ~~Sun~~ ^{Jupiter} is the largest planet in our solar system.
18. **F** In our Solar System all things revolve around the ~~Earth~~ ^{Sun}.
19. **T** The Moon orbits the Earth and the Earth orbits the Sun.

Word Bank

Mars	Neptune	Saturn
Uranus	Earth	Venus
Mercury	Jupiter	

List order of planets from planets closest from sun. * Can ask opposite which is farthest from the sun as well. my Very educated mother just served us nachos

20. Mercury
21. Venus
22. Earth
23. Mars
24. Jupiter
25. Saturn
26. Uranus
27. Neptune
